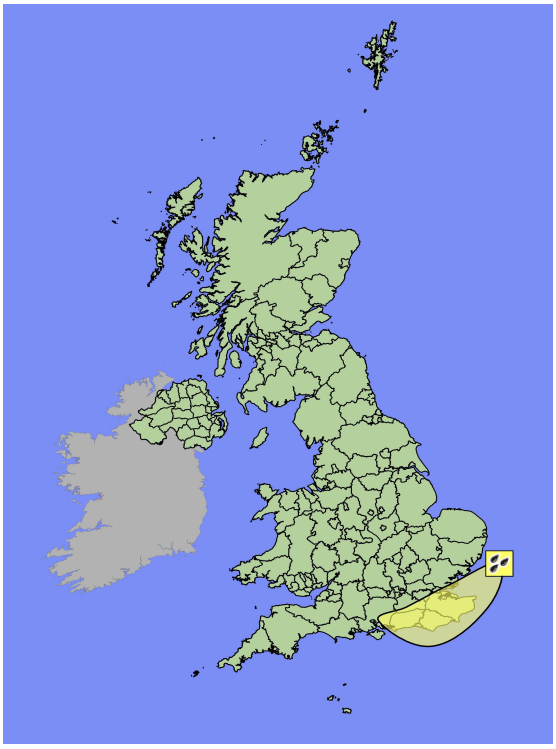
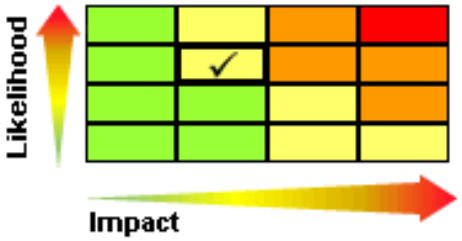
National Severe Weather Warning Service





Chief Forecasters Assessment
The depression which caused the very heavy rain on Monday will gradually drift away southeast into the near continent. As it does so, the associated front will become slow-moving across southeast England on Monday night and well into Tuesday bringing further rain. There is a risk that this may engage some thunderstorms drifting over from the near continent overnight giving the risk of some localised heavy downpours. As yet such details remain uncertain.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:05 on Tue, 12th Jun 2012** until **18:00 on Tue, 12th Jun 2012**

Further spells of rain are likely on Monday night and into Tuesday across southeast England, some of which could be heavy. Given that ground will be saturated in many places following Monday's very heavy rain, there is a risk of localised surface water flooding as well as possible river flooding. The public should be aware that this could lead to some travel problems. The rain should gradually ease from the northwest during Tuesday.
